

## On the Rise: Embry-Riddle's Prescott Campus

Thanks to the generosity and vision of donors like Harry Robertson (facing page), Gertrude Worthington (page 23), Caroline Daniels (page 15), and others, the Prescott Campus is fast on the rise toward world-class status.

Everywhere you look the campus is growing to meet the needs of students poised to lead the aviation industry of the 21st century. Here's an update:

### A New Front Door

Those who haven't visited the Prescott Campus in a while will notice a "new front door" welcoming them in. Greeting visitors with a large, open atrium that befits the time-honored Prescott Campus warmth and personality, the new entrance and Visitors Center (pictured right) provides visitors the ideal starting point for their visit. Rising behind the Visitors Center, Academic Complex I brings students and faculty together into one vibrant academic setting.

### In Step with Industry

Bringing engineering laboratories under the same roof, the Aerospace Experimental & Fabrication Laboratory (AXFAB) mimics the efficiencies and integrated design practices of today's industry and helps build synergy between engineering students and faculty from various programs.

### Bringing People and Ideas Together

Scheduled to open in 2008, the New Chris and Steven F. Udvar-Hazy Library and Learning Center (pictured right) will be the intellectual heart of the Prescott Campus, dramatically enhancing the student learning experience by using the latest technologies to bring people and ideas together.

### A New Lease on Student Life

With ongoing construction on the Fred and Fay Haas Interfaith Chapel and new dining hall, Embry-Riddle students will have ample opportunities to get active in campus life.
